PROFILE

Goal-oriented Java Developer. Committed to continuously expanding knowledge, always willing to search for new techniques and design patterns to better solve problems. As a team player, I do not only take into account the interests of the customer, but also those of my colleagues and managers.

WORK EXPERIENCE

OCTOREEF (MAR 2022 - PRESENT)

Website development - Web-app development

- Octoreef faced challenges with time-consuming and labor-intensive manual ordering processes. Managing over 600 products with 7 unique options each proved difficult, leading to inefficiencies and mistakes, negatively impacting the customer experience.
- I developed a user-friendly website to streamline the ordering process for the printing shop. The website now enables customers to easily customize and order products online, eliminating the inefficiencies and improving the overall customer experience.
- Reduced manual effort for employees with the use of automated systems, ensuring efficiency and accuracy.
- The website successfully reduced manual order processing time by 60%, leading to a 35% increase in sales and a 50% reduction in customer complaints. The streamlined process and elimination of errors greatly enhanced customer satisfaction.

CC WILRIJK (AUG 2018 - MAR 2022)

Database update - ADAS system recalibration - Tesla vehicle repair

- Implemented software testing frameworks on electric cars that led to a 38% decrease in critical errors on electric car systems.
- Created new ways of working and tools that helped increase the efficiency of the car parts ordering process.
- Served as a point of contact for business partners and clients.
